Preface

Clio Reichart

June, 2025

During recent work gathering data for a proposed index to the glyphs of the Dresden Codex, I made an observation that a collocation found on page D33a at B2 had an unusual pattern of glyph placement, the further study of which resulted in the identification of one of the glyphs as a variant of T501 rather than the T604 logogram that had been posited by others. The result was a publication: A Variant of the Codical T501 HA' Logogram (Reichart and Usdi 2023).

To make the argument for the suggested new reading, and to ensure there was no strong evidence against our claim, it was necessary to review all pages of the extant Maya codices, glyph-by-glyph, to find all examples of T501 and T604. This experience is likely a common one for individuals publishing their findings and arguments on codical texts and it makes clear the motive and reasoning behind the current work, the compilation of an index to codical glyphs.

We begin our index to codical glyphs with the Paris Codex because of its brevity, its manageable size. The Paris Codex index was a good prototype to work out our methods of research and presentation of findings. Every example of every glyph that appears in the Paris Codex is presented in an index format with each example referenced to page, section, column, and line, which enables researchers to quickly and painlessly find and compare all examples of any particular sign. Readings and interpretations, which change over time, are avoided. We provide here the data only, without elaboration; a simple tool allowing epigraphers to quickly and painlessly compare all examples of a particular glyph along with the collocation within which it appears. We trust this index will prove useful in the field of Maya epigraphy.

Introduction

Bruce Love

November, 2025

The Paris Codex Index is designed to be a useful tool for students of Maya epigraphy. It begins with a schematic rendering of the accordion-like folded pages for easy reference to the page numbers, followed by color plates of each of the pages, which were copied from Bruce Love's (2024) *The Paris Codex: Handbook for a Maya Priest*, 30th anniversary edition. Each page is accompanied by an overlay guide that designates sections, columns, and rows. The guides were thought necessary because the rows and columns are not always obvious. Extensive wear in some cases has eliminated whole columns and rows that nevertheless need to be counted to be consistent with pages with less wear. Another potential source of confusion regarding the naming of columns and rows is the fact that on the "back" side of the codex the last four pages, pages 21-24, are read from right to left; therefore the columns are labeled accordingly with column A appearing on the far-right side of the page. Pages 23 and 24 are taken as a single tableau or visual presentation (the constellation pages), so the columns are labeled A through M from right to left spanning both pages.

Following the pages and their guide overlays, the index begins, glyph by glyph, in the order of first appearance. Each glyph has a three-digit Paris Codex Index (PCI) number, seen in the upper left-hand corner of the page along with a selected example of that glyph. In cases where a glyph appears multiple times in the codex, the authors chose an example that best represented the "standard" appearance of that glyph. To the right of the chosen example, that glyph's catalog designation is given as it appears in three published catalogs: Macri and Vail (2009), Thompson (1962), and Zimmerman (1956). Below the glyph's "standard" example, on the left side of the page, is a chart showing all occurrences of that glyph by page number, section, column, and row, and at the bottom of the chart is the glyph's total number of appearances. If the glyph appears more than once in a single collocation, its number of appearances is shown in parentheses after the column-and-row designation; for example, one of the examples of PCI-004 is found at P5b, B2(2), which means page 5, section b, column B, row 2 (appears twice). Then the collocations in which each glyph appears are presented, clipped from the codex pages and laid out for easy viewing and comparison, a useful

presentation with the working epigrapher in mind. At the end, there is an “Index to the Index,” created for users to quickly locate a specific glyph and to provide a handy overview of all the glyphs at a glance.

Calendar day signs are not included in this index. For example, the year bearer pages (pp. 19-20), the page of day-sign columns (p. 21), and the constellation pages (pp. 23-24) show columns of day signs, but the individual day signs do not appear in collocations and are not read as parts of longer texts, therefore the authors decided not to include them.

There are 203 unique glyphs in the Paris Codex (not counting day signs), a rather high number considering there are only 22 pages. The most frequently appearing glyph is the **li** glyph (PCI-004) that appears 65 times in the codex, followed by the **wa** glyph (PCI-001) that appears 49 times. Next in frequency are **ku** (PCI-011), 42 times; **AJAW** (PCI-067), 38 times; and **‘u** (PCI-005) at 35. There are 80 glyphs that appear only once! This brief summary and overview of total appearances and frequency of appearance is just one example of what the authors hope is the usefulness of this index. May this modest contribution to the field of Maya studies prove helpful in our ongoing quest to hear the voices of the ancient (and present-day) Maya.

In the case of the Paris Codex, unlike Classic Period inscriptions, the orientation of the Ajaw faces, upright vs. inverted, does not seem to distinguish the signs as separate glyphs, as can readily be seen by comparing the examples here and on the following two pages at P6b H12, P13-15c F1, P18b B2, and P23a L5.

We treat PCI-070 (open hand with “sky sign”), PCI-105 (open hand with inverted Ajaw sign), and PCI-186 (open hand with “mu curl”) as individual glyphs; Macri and Vail (2009) list both the latter two as MZE.
